The Botulinum Toxin Foundation
European Society for Stereotactic and
Functional Neurosurgery

Invitation

Dear colleagues,

dystonias are amongst the most common movement disorders. Botulinum toxin therapy and deep brain stimulation have revolutionized their therapy. However, there are huge unmet therapeutical needs. With this meeting we want to advance existent therapies, improve their differential use and stimulate research in new therapeutic approaches. We hope that this meeting will serve as an open platform for all of us who collaborate to improve the future of patients with dystonias.

Eckart Altenmüller

Dirk Dressler

Joachim K. Krauss
